DETAILED ACTION

1. This communication is in response to amendment filed

Response to Amendment

2. Claims 1-4 are currently pending and have been allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The claimed inventions pertain to a method of managing risk, and more particularly, to a method of managing operational risk and return with respect to network service-level agreements (SLAs).

4. Michaud et al. (US Pat. 6,003,018) is deemed the closest prior art of record.

Michaud discloses a method for evaluating performance of a portfolio (abstract). Michaud teaches calculating efficient frontier that identifies efficient portfolios using a plurality of inputs (see summary of the Invention, col. 2) and evaluating performance by comparing the current portfolio and the efficient portfolio with the desired level of risk and return (specified risk objective, col. 2 L 58-60). However, Michaud does not teach or suggest an efficient frontier that identifies efficient portfolios of SLAs each having a value of desired level of risk and return for the service provider using inputs comprising at least one of characteristics of the production infrastructure, traffic characteristics, QoS characteristics, and the price of each class of the SLAs. Furthermore, it would not be obvious to one of ordinary skill in the art to modify Michaud because the problem that Michaud is attempting to concerns selection of a portfolio of tangible or intangible assets subject to optimization criteria yielding an enhanced mean-variance efficiency. The instant claims concern management of operational risk and return with respect to a portfolio network service-level agreements wherein the optimization is based upon adjustment of the SLAs.

5. The claimed inventions are allowed because the prior art of record fails to teach or suggests a method of managing operational risk and return of a production infrastructure by:

calculating an efficient frontier that identifies efficient portfolios of SLAs each having a value of desired level of risk and return for the service provider using inputs comprising at least one of characteristics of the production infrastructure, traffic characteristics, QoS characteristics, and the price of each class of SLAs.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
